

NEW STYLES & COLORS!

Welcome

Raising chickens is the perfect hands-on family project that teaches a child so many wonderful life lessons, and allows all of us to be a little closer to nature.

Enjoy...

Enjoy fresh eggs and family fun with a quality-built chicken coop! Choose from a variety of styles and sizes – with a long list of standard features. Or let us customize your chicken coop to meet your specific needs. Either way... it's sure to give your chickens something to cluck about!

With your complete satisfaction a top priority, our family-owned business is proud to offer you a full line of handcrafted chicken coops at affordable prices. All designed for the comfort and safety of your feathered friends... and easier egg collecting for you.

Chicken Breeds to Consider for Your henhouse

1. Rhode Island Red

Great layer of brown eggs. Good looking chicken. Good disposition.

2. Buff Orpington

Fat yellow chicken which lays brown eggs. Very docile.

3. Barred Rock

Interesting black and white striped pattern. Decent layer of brown eggs and good disposition.

4. Americauna

Fuzzy face, large chicken. Lays blue eggs! Good disposition, generally friendly.

5. White Leghorn

Prolific white egg layer. Nervous and flighty, not as docile.

Tips for Problem Solving in the henhouse

Keep chickens safe with a ramp

- **Feeding Incorrectly**

1. Table scraps are not a good solution for chickens. They do not provide the necessary diet needed to promote good egg laying and long life.
2. Only feeding on grass will usually also be problematic as necessary nutrition is not received from only grasses. Today's breed of chicken cannot survive on the same diet as chickens from 30 years ago.
3. Make sure wild birds do not have access to your chickens water and feed containers.
4. Chickens need twice as much water as they do feed. If you do not use an automatic waterer, change water daily and make sure there is always plenty available. Lack of sufficient water will take large tolls on the health of a chicken very quickly as they need water to digest food properly.

More Common Problems with backyard chickens, and how to fix them.

- **External Parasites (ticks, mites etc)**

1. Most are successfully treated with products available from your local rural merchandiser and you should routinely treat the chickens every 2 or 3 months.

- **Red Mites**

2. Chickens infested with red mites will stop or slow down laying eggs, hesitate to roost in normal area, and may become anemic.
3. Take a white tissue and wipe along the underside of perches at night when birds are roosting. Look for tell tale blood smears.
4. Check often as they multiply quickly and are hard to get rid of if caught after they become very evident.
5. For best results treat several times in the course of several weeks to get total control over the situation with a combination of wet and dry solutions.

A chicken house with wiring allows for automatic waterers and lights.

Common Problems

with backyard chickens, and how to fix them.

- **Broody Hens who refuse to leave the nest**

1. Try to break the habit by removing eggs as soon as they are laid.
2. Keep her away from the Nesting Boxes for approximately a week.
3. Nest inserts can be used which cause eggs to roll away as soon as they are laid.

- **Blocked or Sour Crop**

1. Keep poultry grit readily available at all times to help healthy digestion.
2. Try feeding her some oil and massaging several times a day to loosen blockage.
3. Garlic and natural yogurt can also be tried.

- **Hen Pecking**

1. Can be caused by boredom. Add items for distraction: a head of cabbage, greens, or hang a Peck a Block in the run.
2. Overcrowding can cause pecking, keep flock at the recommended size for your house.
3. If one hen seems to be being picked on and blood is being drawn, she must be removed as blood only encourages more pecking. Anti peck products can also be applied to the picked on hen to try to break the habit.

Predators and how they kill

- ## Raccoons

Raccoons prey on chickens at night and sometimes during the day. They can reach through wire and will often pull the chickens head or legs off, through the wire. They also can tunnel under runs without wire flooring. Easy latches can be opened by raccoons.

- ## Dogs

Most dogs are natural predators and will find chickens very hard to resist. Even family pets, unless trained, will be tempted by your chickens. Most dogs will eat the chicken, leaving only feathers. Dogs can be trained to let them alone or even guard them. Some dogs will only chase or 'play' with them but the trauma can keep the hen from laying eggs for months.

- ## Skunks

Skunks tend to eat the eggs more than kill adult poultry but they have been known to do that occasionally also. Eggs will usually be crushed inwardly and chickens will have the head removed as the skunk wants to drink the blood.

- ## Hawks

will kill adult chickens if they are outside without the protection of a cage with a wired roof. Prey is killed with talons and torn into bite size pieces with the beak.

- ## Snakes

Venomous snakes can kill full sized hens but most snakes will go for the eggs. Keep the henhouse secure with no cracks or holes. Keep tall grass cut and do not have your henhouse close to compost piles or piles of logs or rocks, as these are snakes favorite hideouts.

- ## Cats

Cats (even domestic pets) enjoy the thrill of the hunt and can prey on small chickens and chicks. They can be trained to see them as fellow pets however. Metal mesh, barbed wire picket fence and tall hedges with thick lower growth can deter them.

- ## Opossum

Opossum will eat the chicken feed, eggs, chicks and will attack chickens. Keep a strong cage and your chickens penned at night.

- ## Bobcat, Coyotes, Fox

All of these enjoy eating chicken. Secure your chickens at dusk in a tight and strong henhouse to deter them. Large breed dogs are good to dissuade the animals from the property or at least to alert you to their presence.

- ## Other Predators

rats, mice, owl, crow, squirrel, Fisher cat, bear, mice, mink, weasel, lice, mites

Lean-To Style

Designed to allow you to set it against a wall or fence.

Beige Lp® Siding With White Trim.

Feed Bins

- 2'W x 4'L x 42"H
- Holds 2 bags of feed and one bag of shavings

Adding a feed bin to set beside your chicken coop allows you to keep your feed and bedding close by and secure from rodents.

Match your feed bin to your henhouse with matching stain or paint and trim.

Custom sizes are available.

Tips for keeping a successful henhouse

Interior view of Quaker

All Year Round!

When keeping chickens through the winter, don't forget that:

- Chickens need extra grain to keep them warm and also to compensate for lack of grass and insects.
- Keeping the coop filled with the recommended amount of chickens helps keep the temperature comfortable.
- Make sure the birds have water ... not ice.

Guidelines for housing needs:

- Most coop guides suggest approximately 2 square feet of space per adult bird.
- At a bare minimum, the coop should be easy to clean, well ventilated but draft-free, include clean watering and feeding stations, and offer adequate roosts.
- Good, natural light is a plus.
- Dirt floors can work where the soil is sandy and the drainage reasonable, but a wooden floor is vastly easier to clean and protect. We recommend our epoxy surface for ease of cleaning.
- Good bedding, such as sawdust (untreated wood only), wood shavings, or chopped straw is ideal.

ADD A FEEDROOM TO YOUR COOP

Adding a feedroom to your coop makes caring for your chickens so much easier! No more hauling feed and supplies - you can have them inside an attached room!

Feedroom Layout Ideas

The space where the nesting boxes are in the coop continues through the feedroom. This allows for extra storage space in the feedroom.

Run Options
